

Chop Your Heating Bills In Half

With a Mitsubishi Air to Air Heat Pump system from Delta Climate Control

Better for the environment. Better for your budgets.
Better heating all round - even in the largest of halls.

Energy efficient heating and cooling technology that's cheap to install, cheap to run and which performs better than traditional systems is available now. Better at heating your property in winter, plus it will act as an energy efficient air conditioner in summer, cooling you down on hot, humid days.

Better still, the Energy Savings Trust are so keen on this way of heating that they're providing up to 50% grants for charities, community groups and public sector bodies to install it (and up to 30% for homeowners).

Over the past couple of years we have installed a lot of air to air heat pump systems in village and community halls, and the feedback we've received from our customers has been so overwhelmingly positive that we thought it was a good idea to write to people and organisations like yourself to make you aware of these systems and the grant support that helps people take advantage of it.

We have been specialists in this technology for over 10 years. We provide services right across the UK, and we have bases in southern and central Scotland, and the north and south east of England.

Contact Michael at Delta Climate Control on 01576 300 531 for an informal chat or to arrange a visit with one of our expert advisors.
